

Fenyx: The Warehouse Accuracy Operating Layer

Turn tribal floor knowledge into living accuracy agents.
Built by warehouse ops, for warehouse ops.

The Rhythm of the Floor

The warehouse doesn't run on software alone. It runs on hustle, heart, and fast-paced radio chatter. Your team is putting in the work, bleeding for the shift, and moving fast to stack chips and clear docks. But in this fast-paced hustle, the most critical rules are spoken, not recorded.

How It Works (The Kitchen Analogy)

Think of your warehouse like a busy restaurant kitchen.

The Cash Register

This is your WMS. It only knows what was sold after the fact. It handles the finances, but it doesn't know how the food was made.

The Chef's Brain

This is your Tribal Knowledge. Unwritten tricks, safe shortcuts, and quick fixes kept only in the veteran worker's head. When they leave, the recipes leave with them.

The Voice-Activated Recipe Box

This is Fenyx. It sits on the counter. When a worker shouts a new trick, the box writes it down, turns it into a living rule, and warns the next shift to prevent errors.

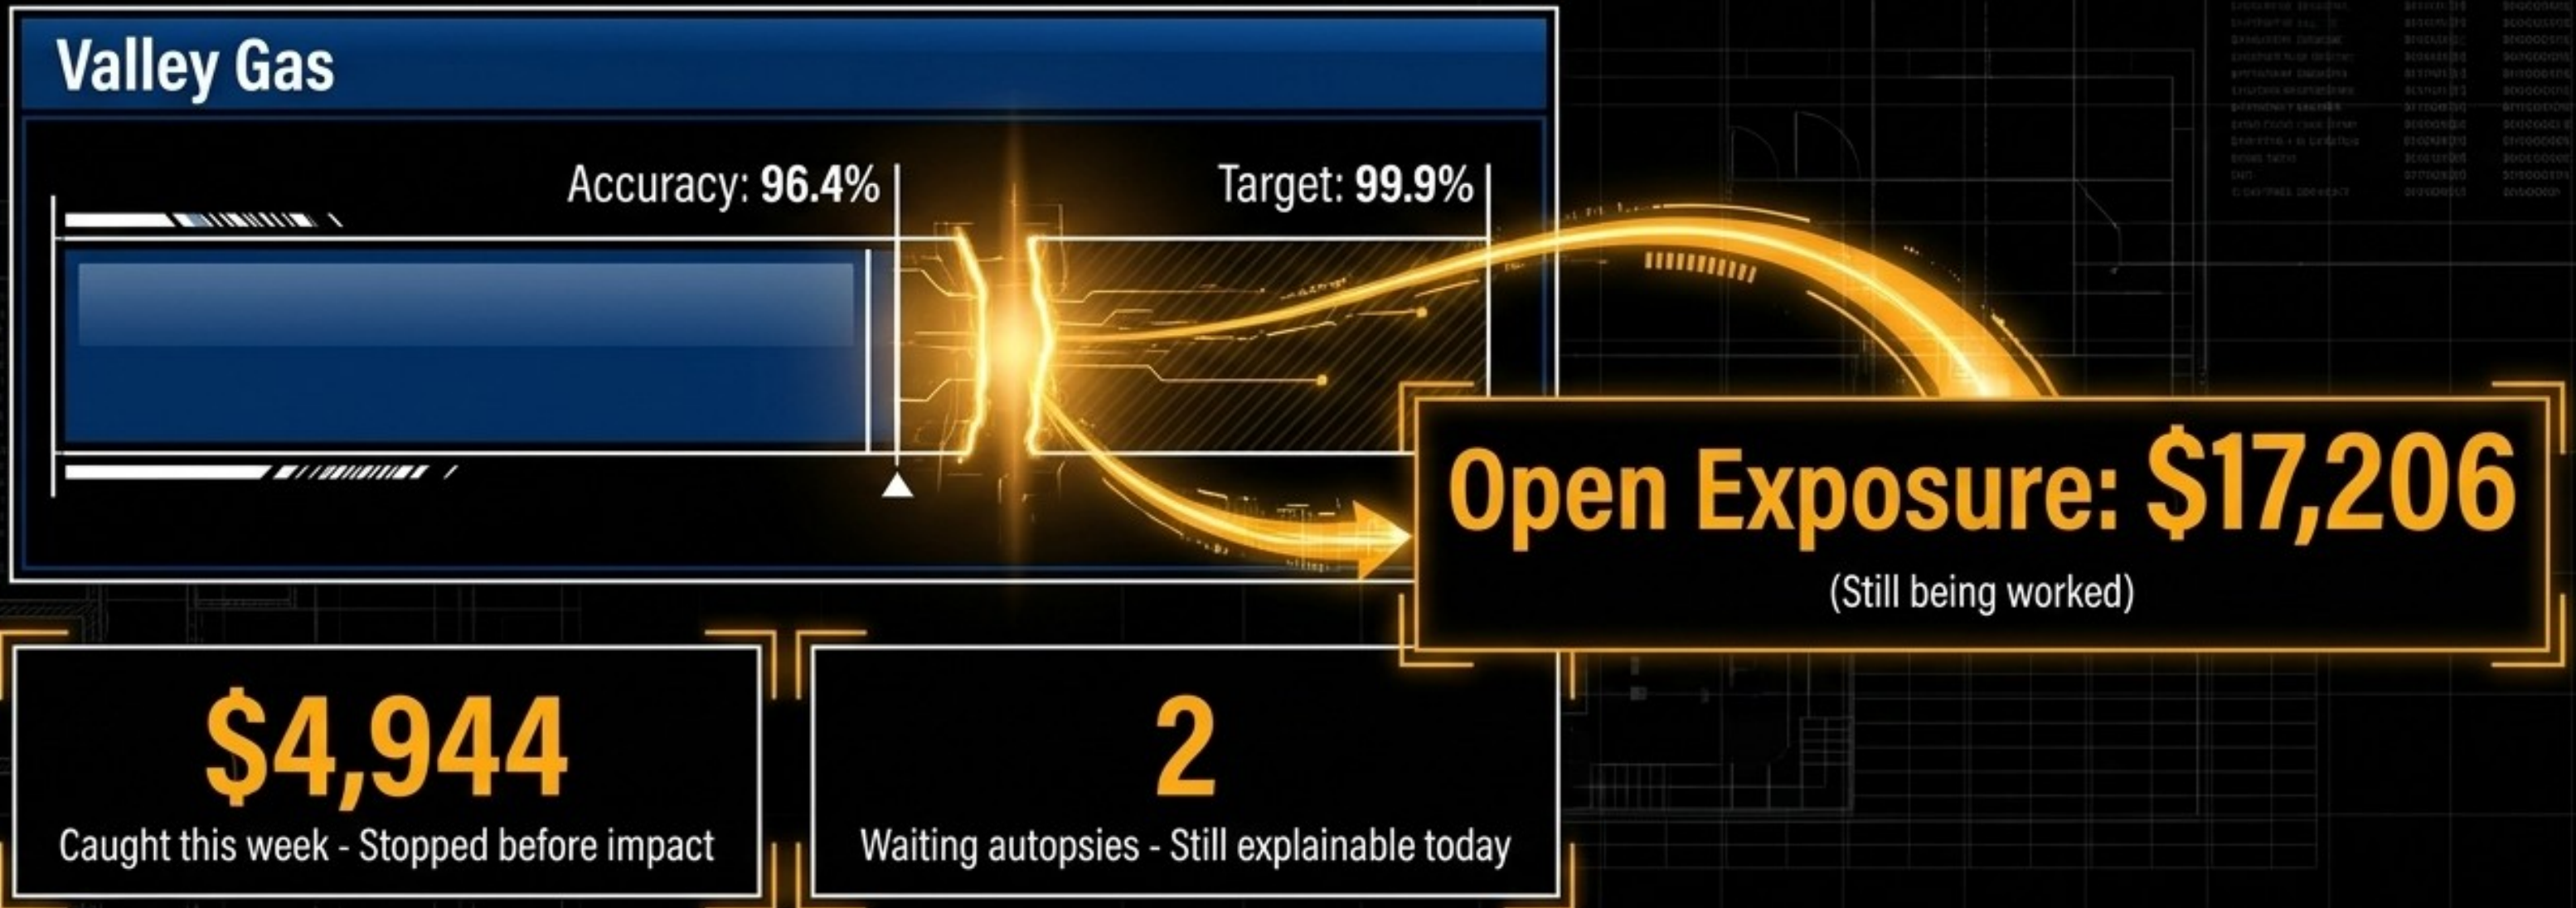

People change. Knowledge shouldn't leave.

The 99.9% accuracy target depends entirely on veterans remembering what the system never recorded. When a lead moves to another shift or takes a new job, their expertise walks out the door. SOP paper binders don't update when the live unload rule changes on Door 3.

Three and a half points of gap is not a rounding error.

Exceptions hide until they're expensive. A missed heat-treat stamp or mixed utility lot becomes an audit, a mis-ship, or a chargeback before anyone posts an adjustment.

Bridging the Gap: Systems vs. The Floor

The WMS Alone	Tribal Knowledge	Fenyx Layer
• Rigid system of record • Purely financial focus • Posts adjustments after errors occur	• Highly fluid • Owned by the floor • Unrecorded and lost instantly during turnover	• Agile and preventative • Floor-owned but system-aware • Captures knowledge as living rules

The Accuracy Layer Sits Beside Your WMS

Fenyx does not touch finance. It tracks operational exceptions and process drift without altering your core system of record or posting financial inventory adjustments.

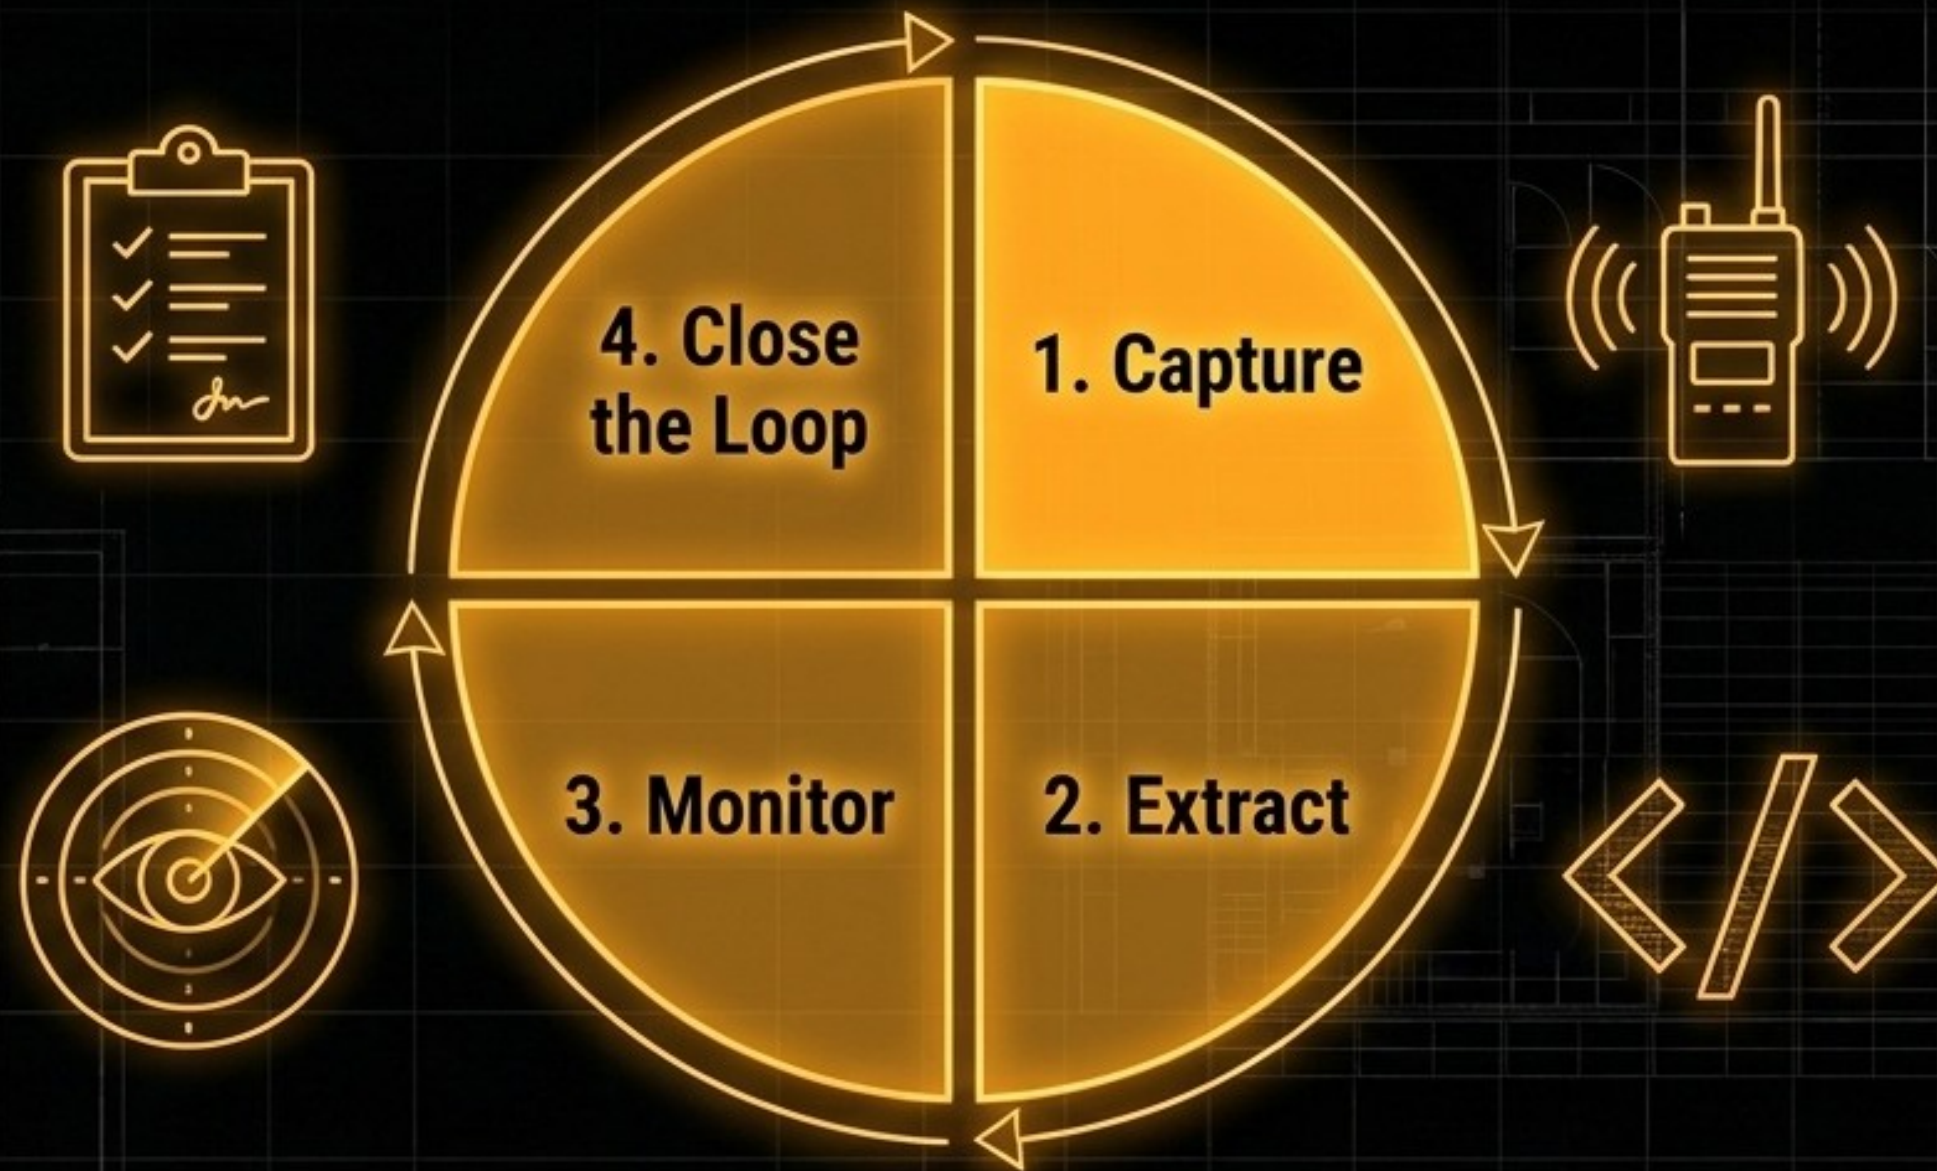

Core WMS/ERP
(Financials, Inventory
System of Record)

Fenyx
(Accuracy Tracking,
Rule Enforcement,
Tribal Knowledge)

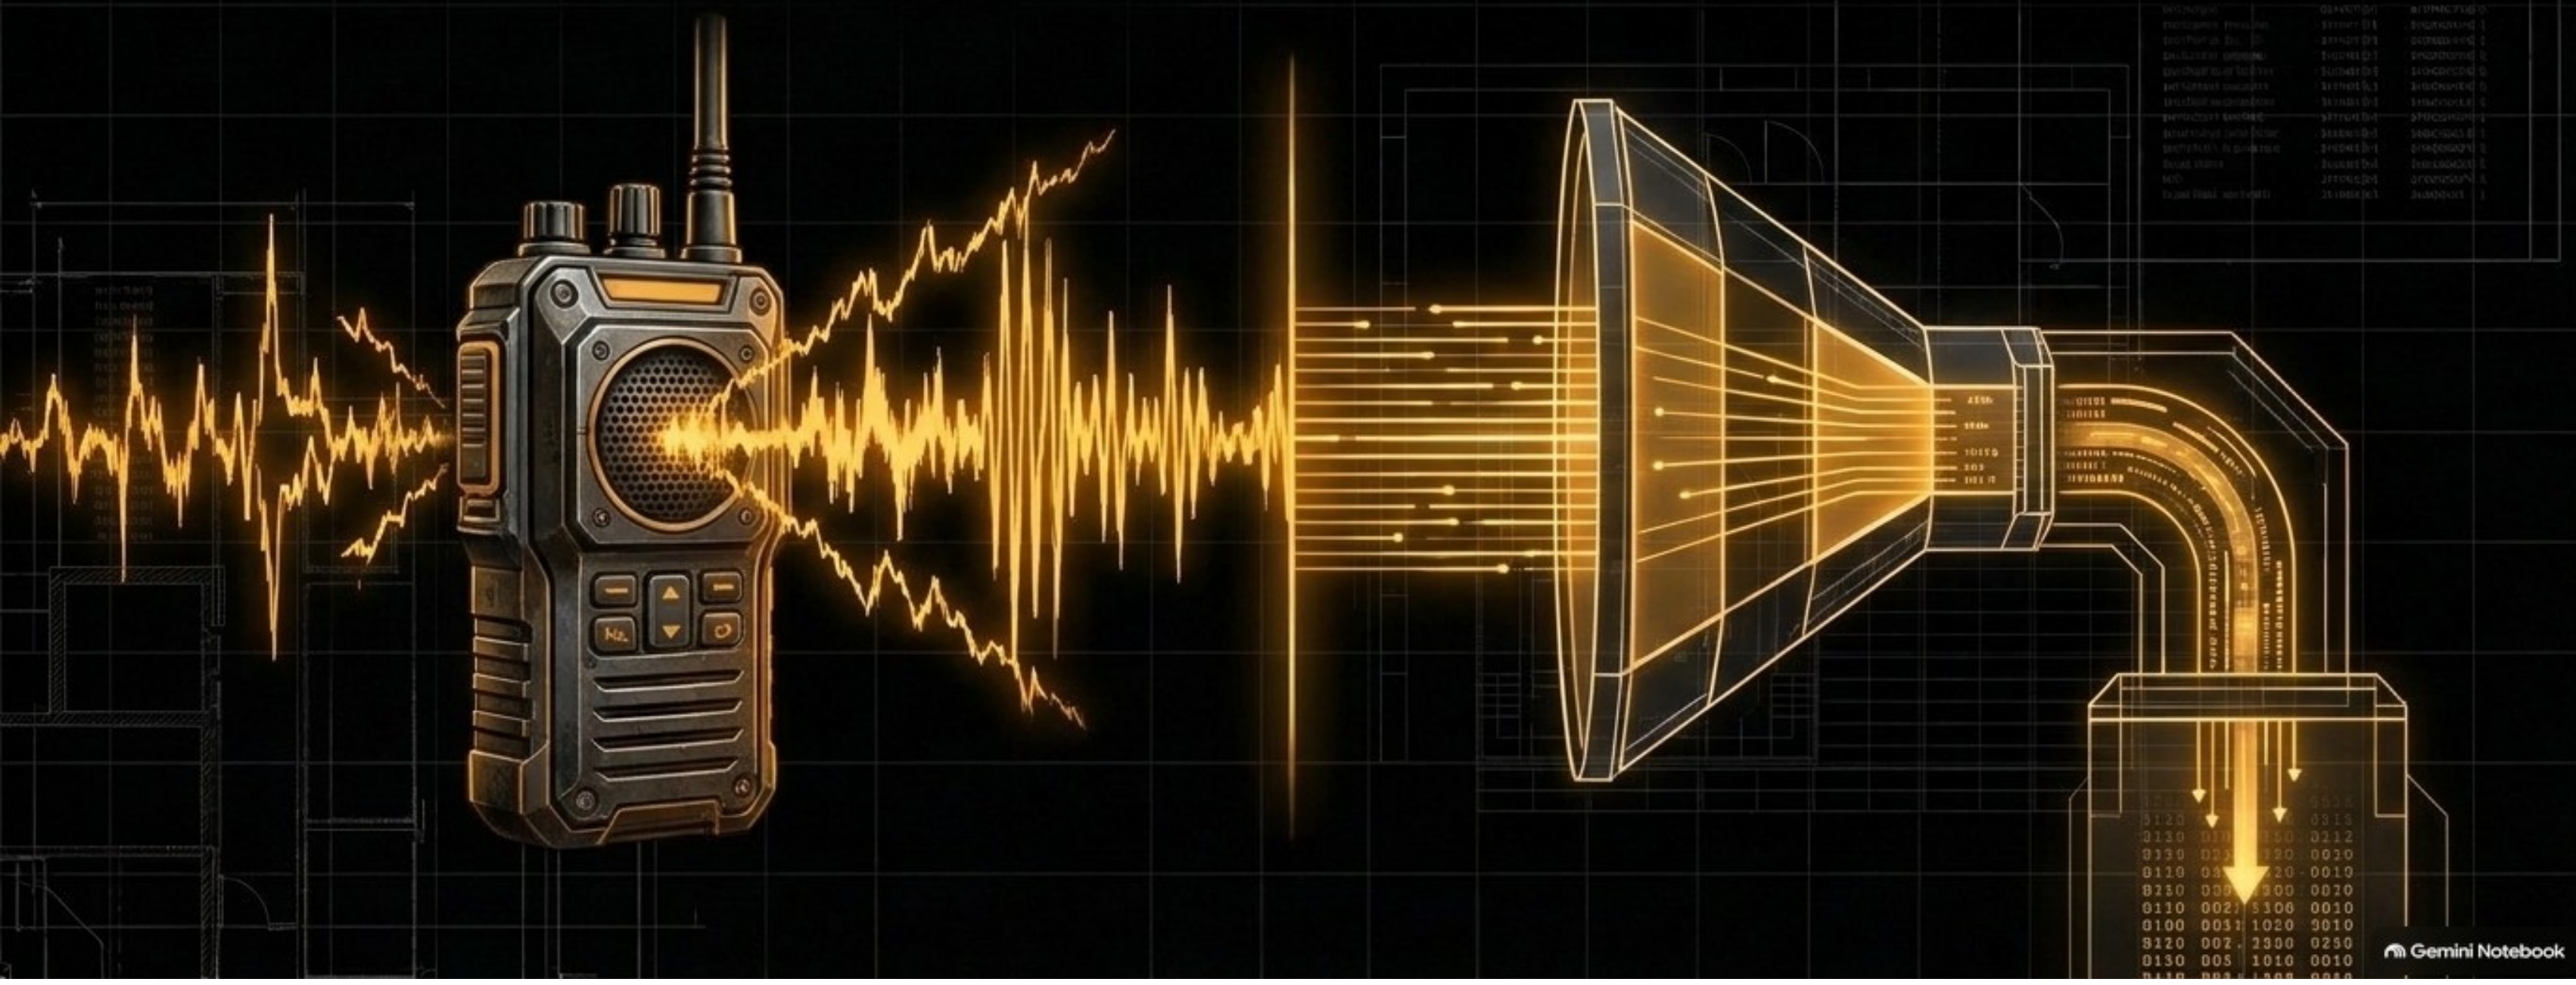

One Cycle. Floor-Owned. No Purple AI Poetry.

The Fenyx engine operates through a continuous, repeatable loop that translates raw warehouse hustle into protective business logic.

Step 1: Capture Raw Hustle

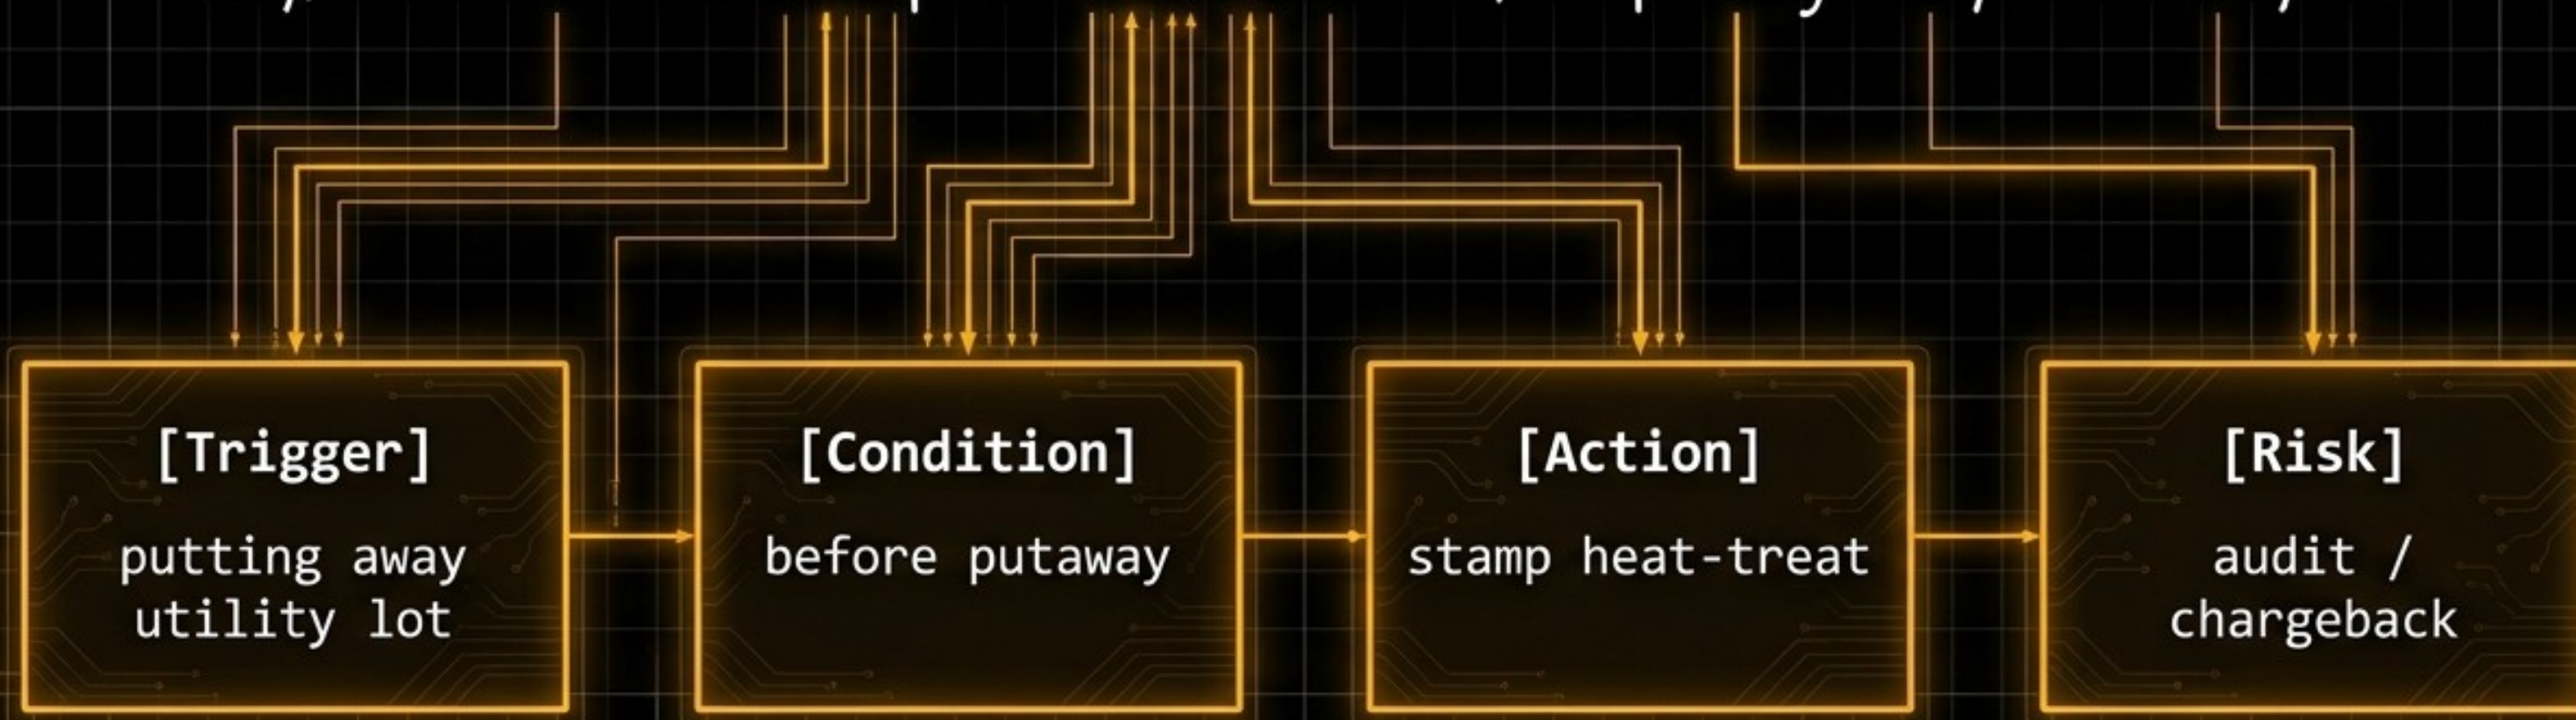

Talk, text, or paste the tribal note exactly the way you'd say it on the radio. No complex forms to memorize. Do it illegally fast, do it on the fly—the system is ready for the raw input.

Step 2: Extract Structure

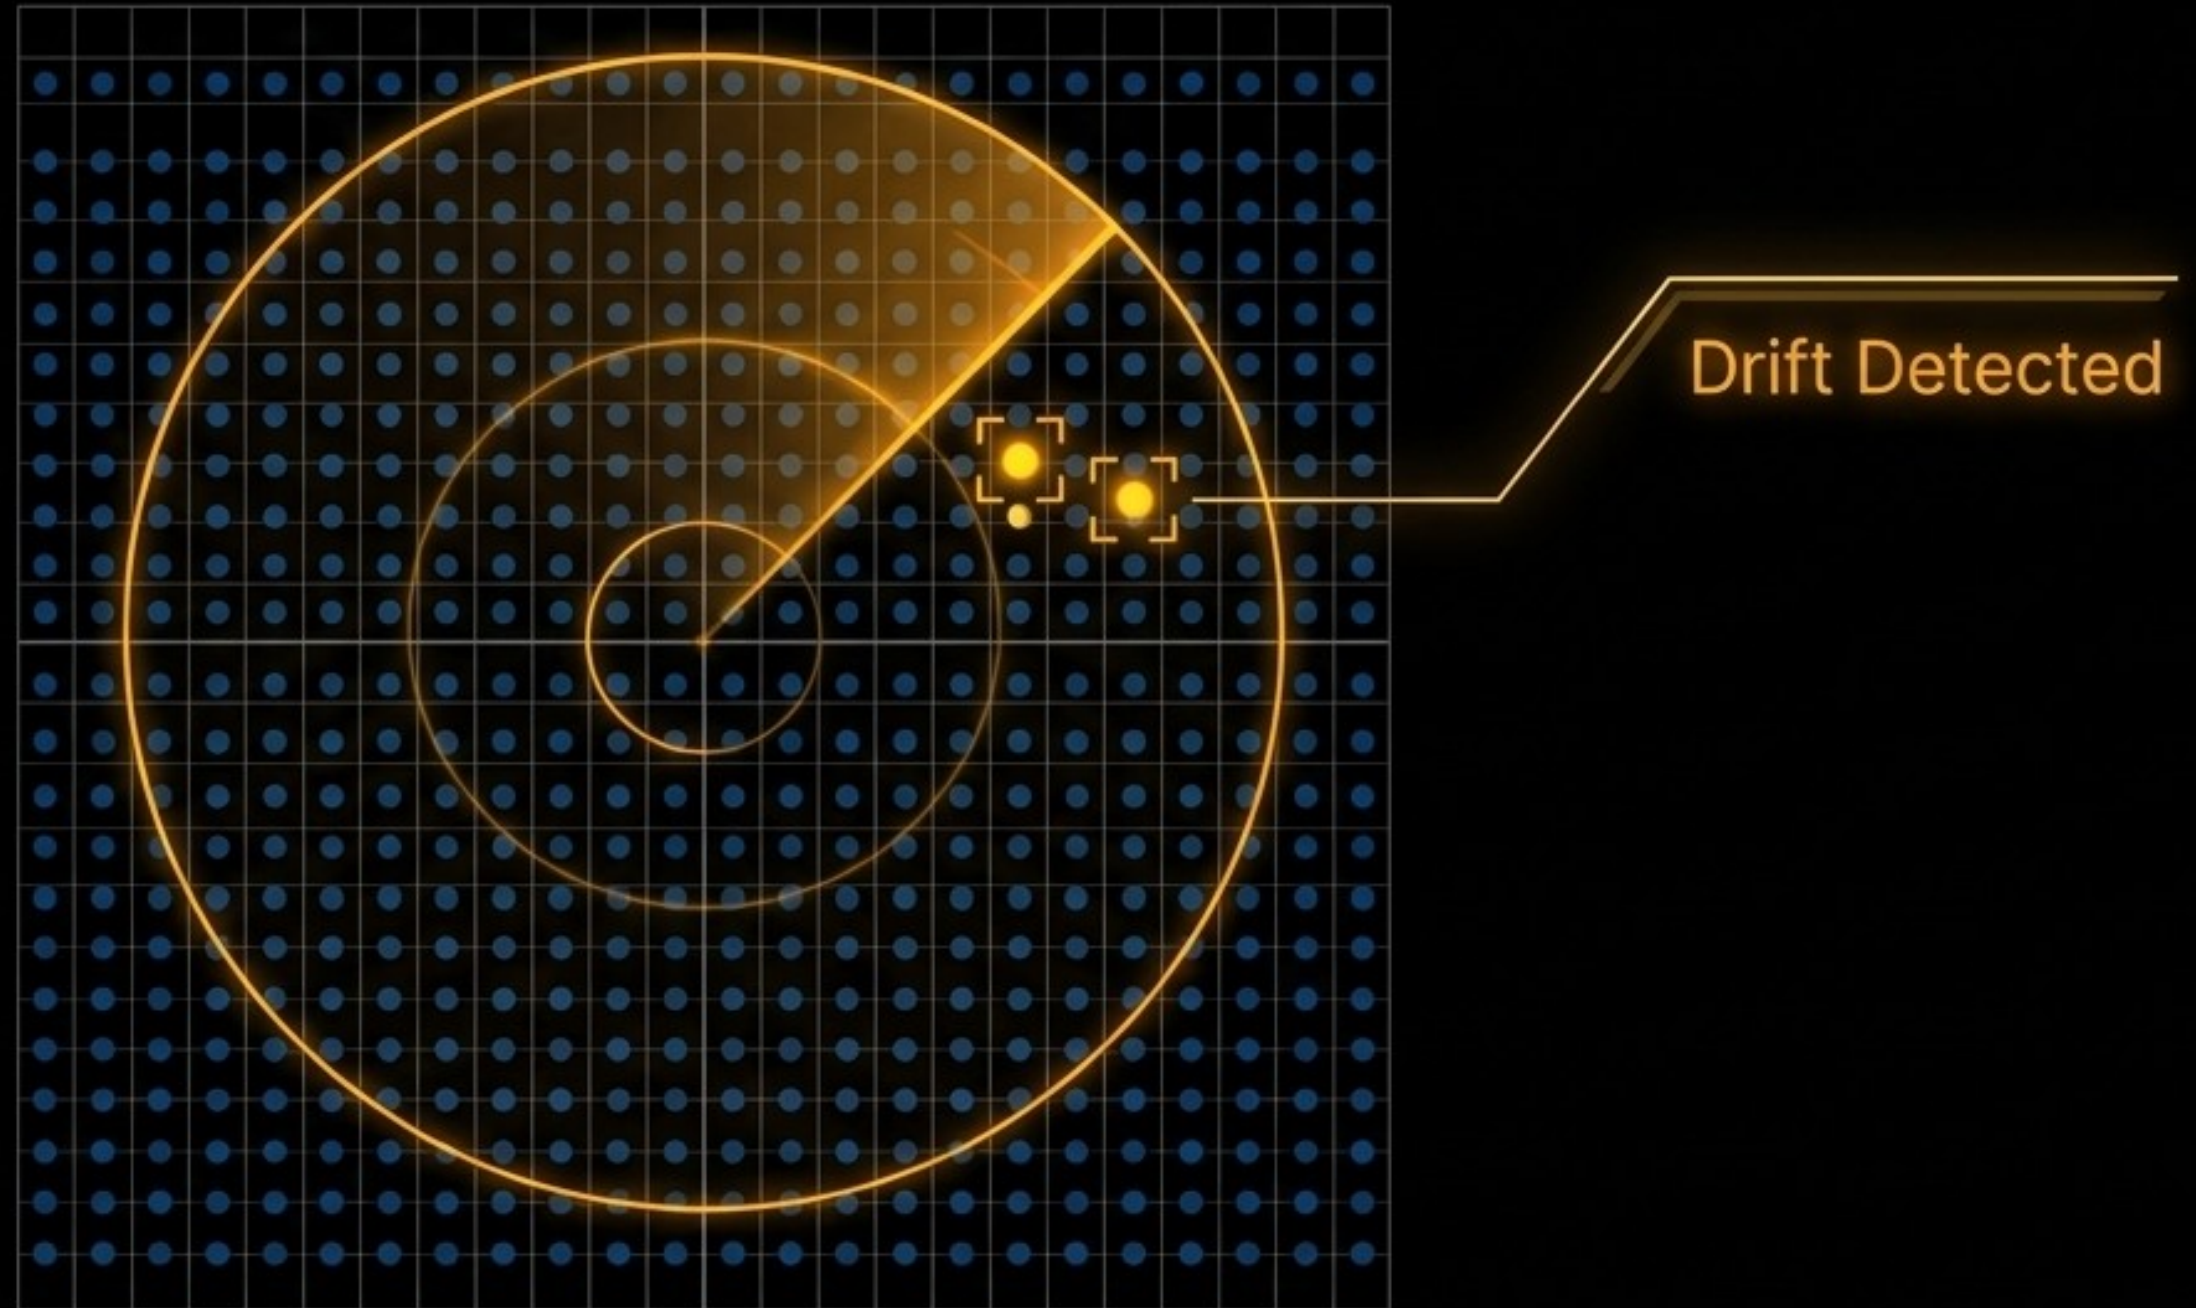

Fenyx automatically structures the raw floor notes into defined, floor-readable, and system-aware logic.

Hey, make sure we stamp the heat-treat before putting away the utility lot.

Step 3: Monitor for Drift

Living rules continuously watch your operations for drift. Exceptions surface immediately, catching deviations before they become mis-ships, audits, or chargebacks.

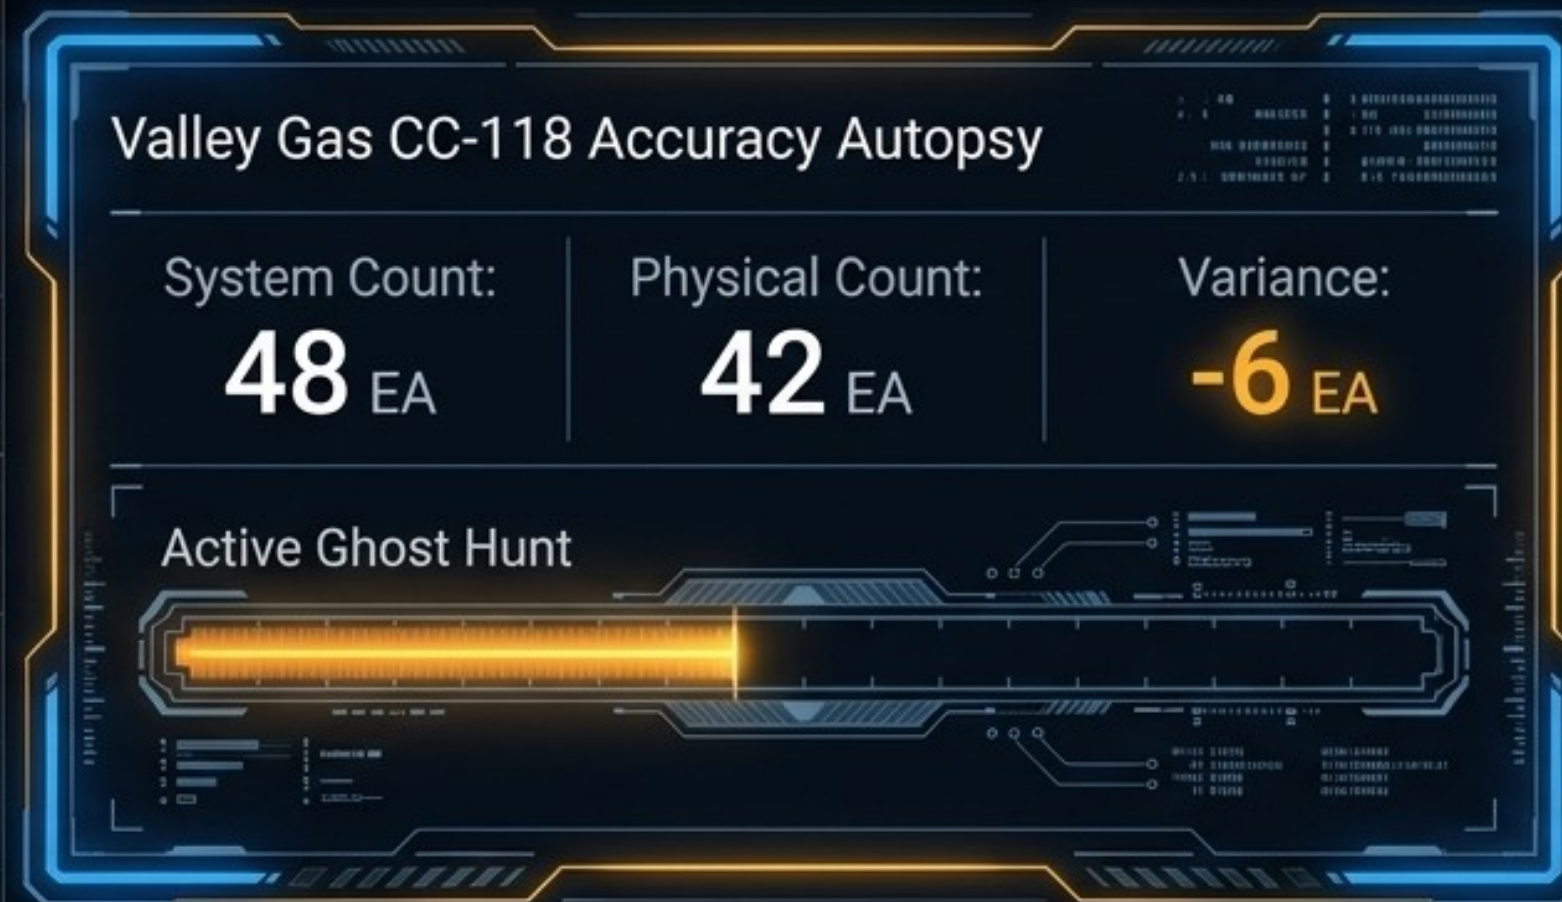

Step 4: Close the Loop

Validated rules are promoted instantly. Fenyx drafts updated Standard Operating Procedures (SOPs) so you can hand tonight's shift a fail-if procedure for same-day training.

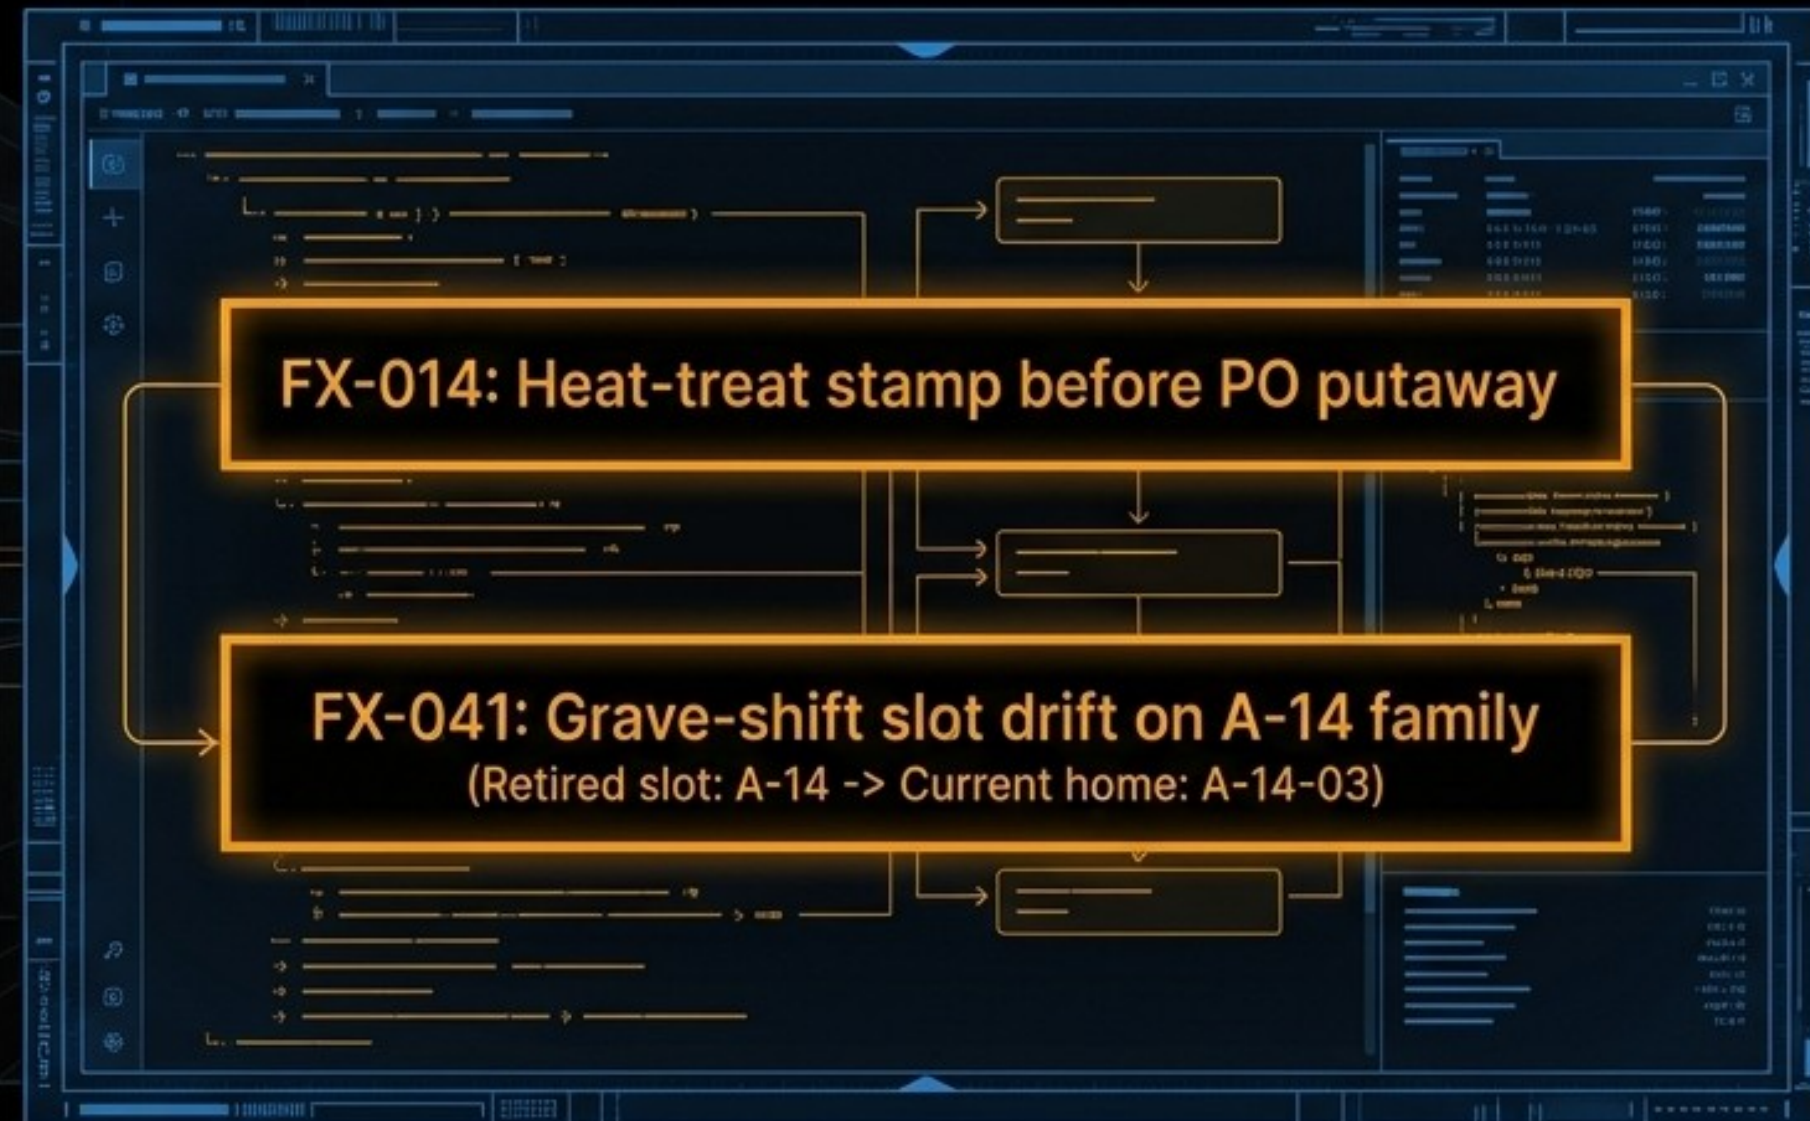

Proactive Variance Autopsies in Action

Instead of discovering inventory discrepancies after an adjustment is posted, supervisors use Accuracy Autopsies to rank causes, confirm root issues, and kill assumptions.

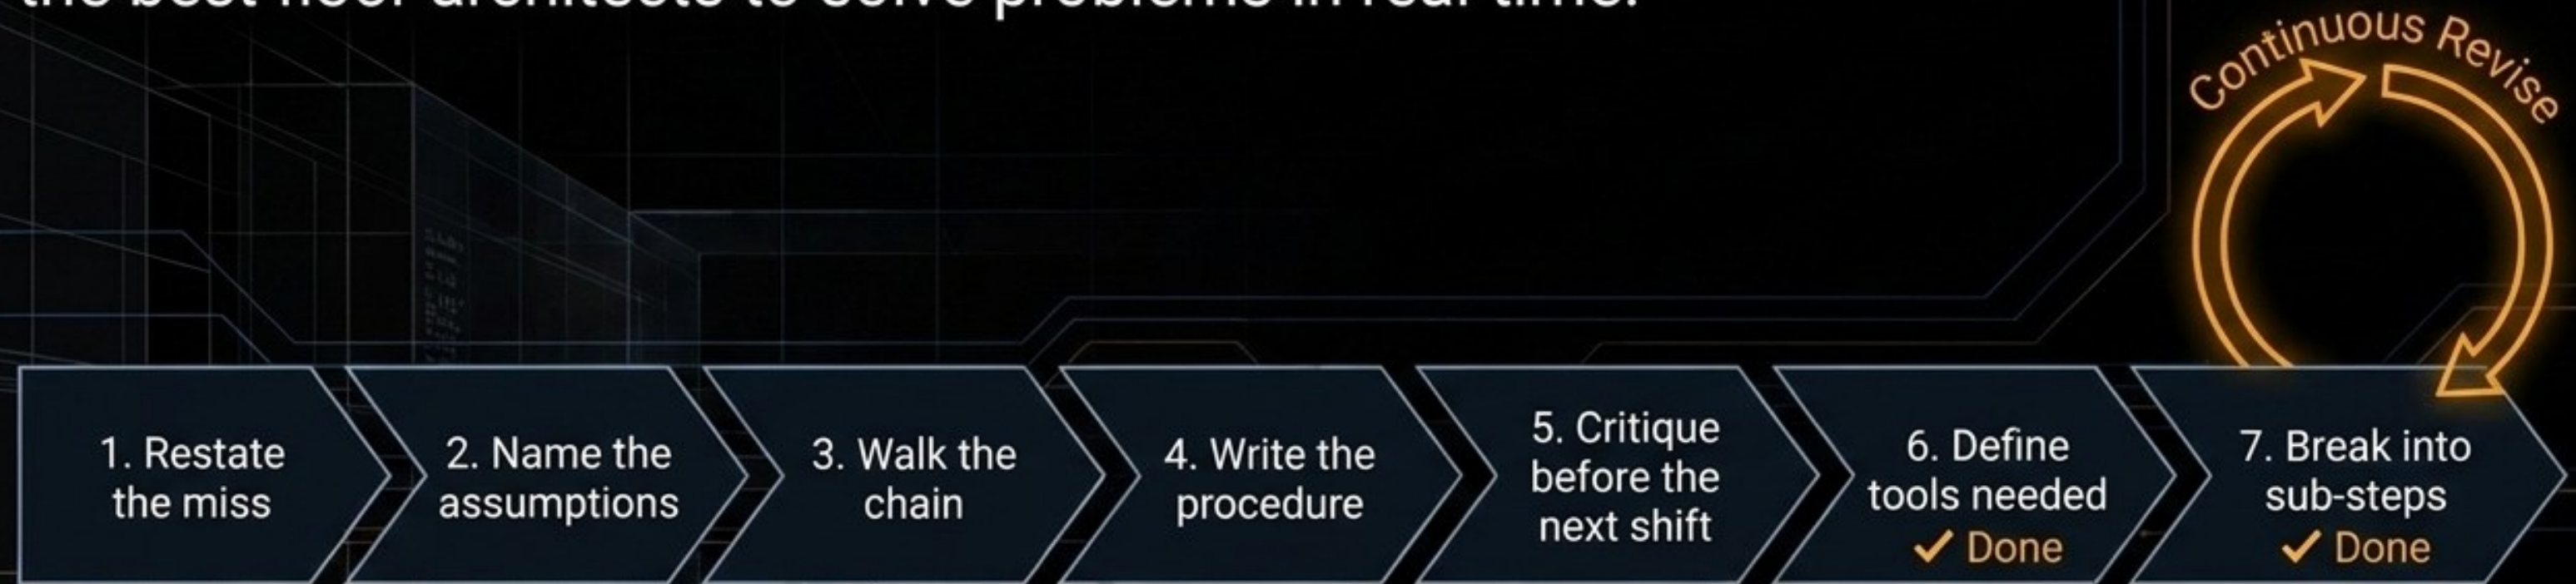

Pinpointing the Tribal Root Cause

The autopsy doesn't just find the missing items; it identifies the broken floor rule that caused the leak.

Built on the 7-Step Architect Loop

Fenyx is built with the same logical framework used by the best floor architects to solve problems in real-time.

Three Real Paths. No Slideware.

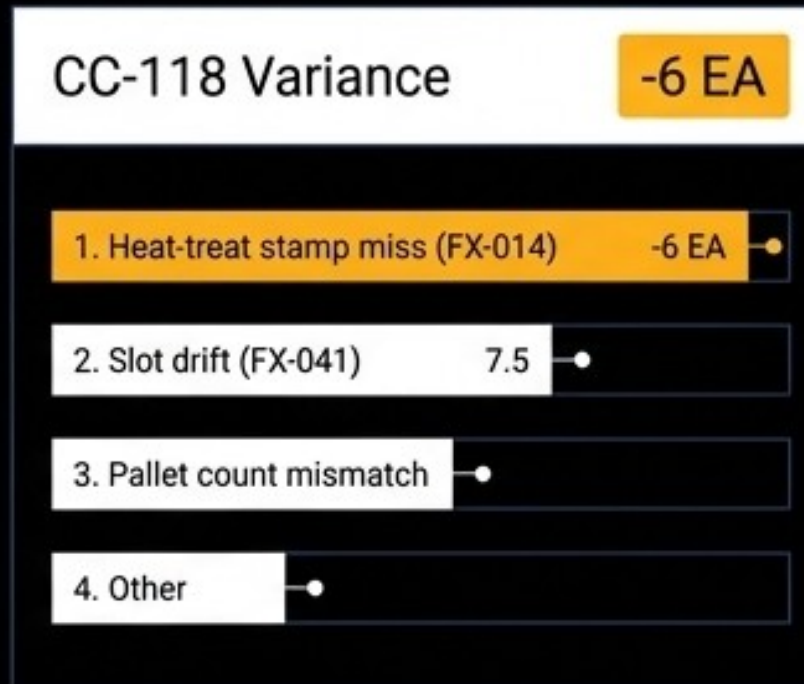

Command Pulse

View the financial gap before posting.

Accuracy Autopsy

Rank and kill causes.

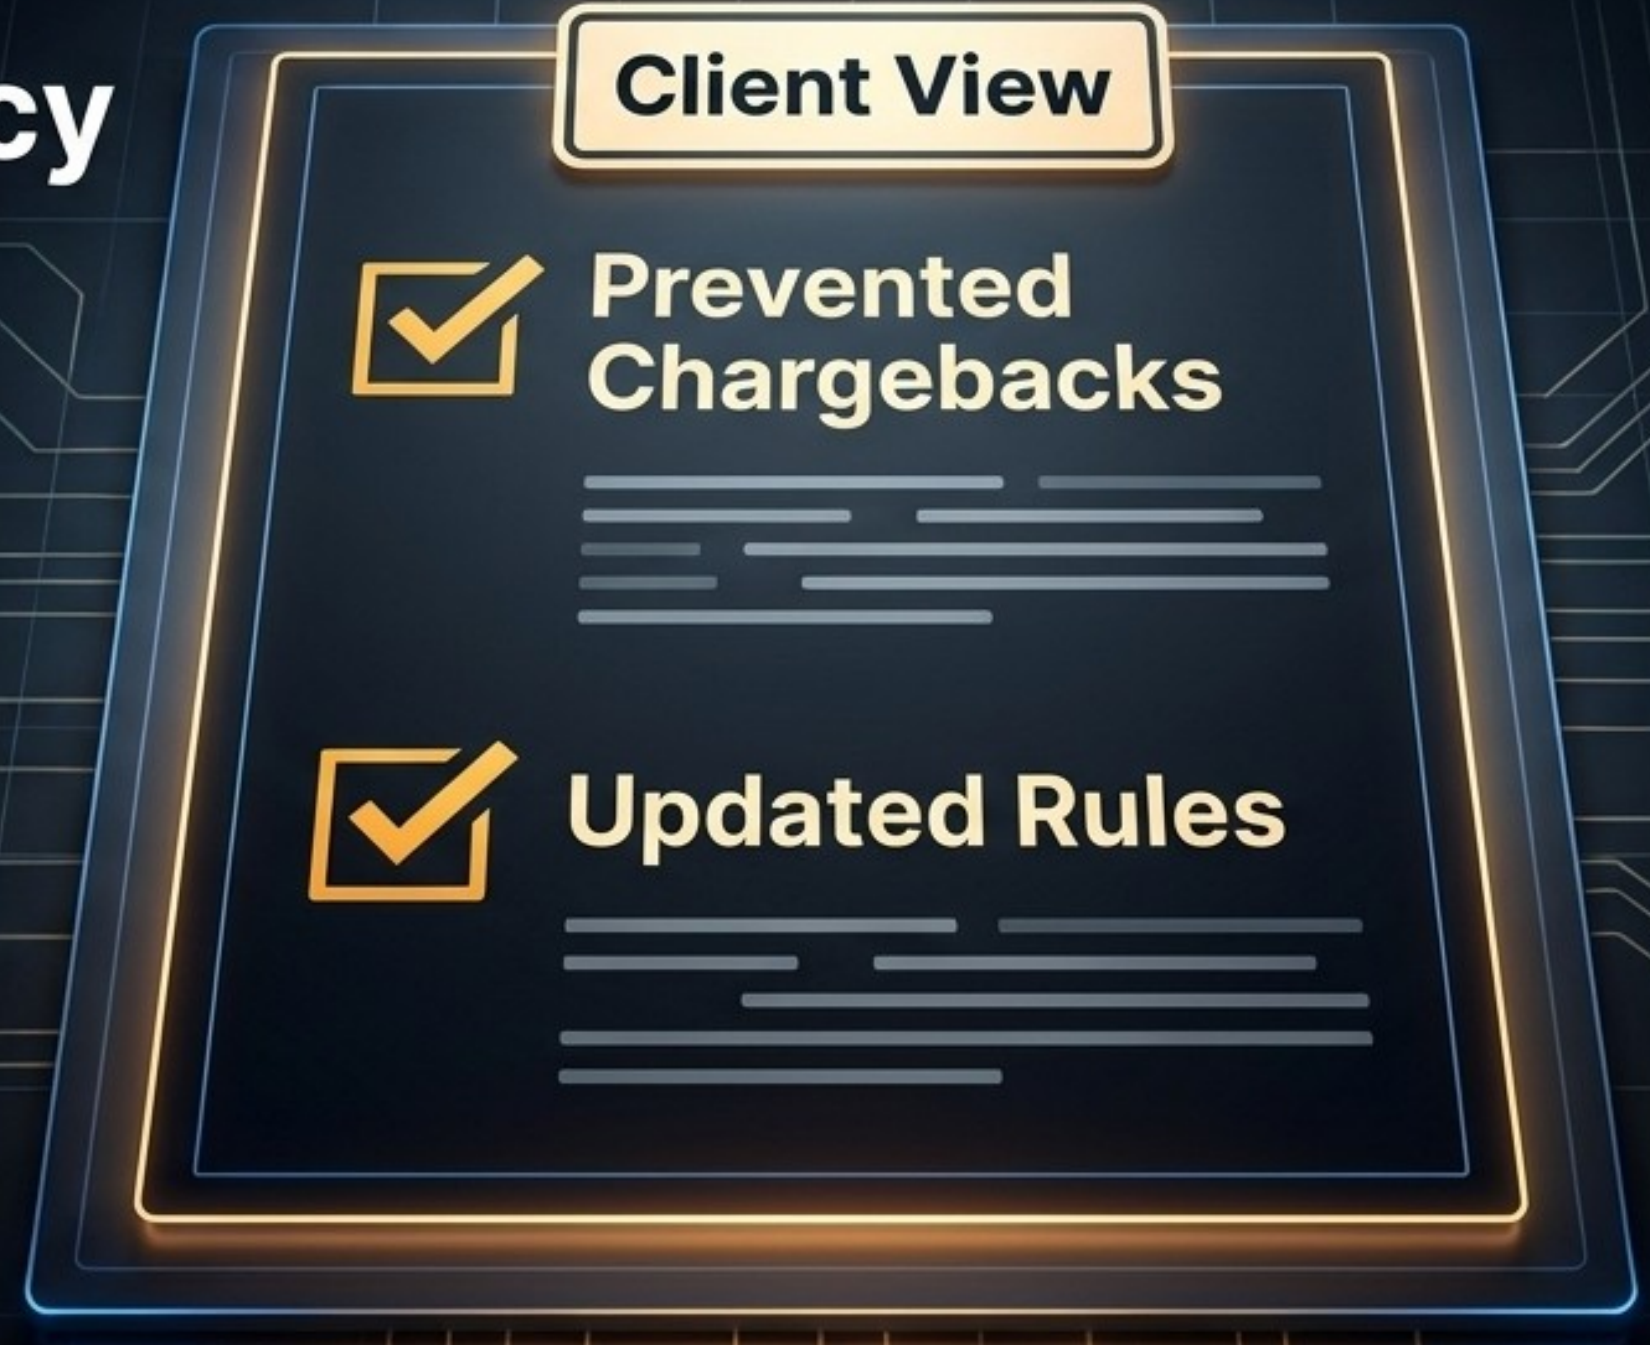

Trust Pack

The client-safe view.

The Trust Pack: Client-Safe Transparency

Turn operational saves into client trust. The Trust Pack generates a weekly page your clients can actually read: what was caught, what stays open, and which rules were updated to protect their inventory.

Deployment: Stop the Walkout Today

One prevented mis-ship or chargeback clears the pilot.

Pilot
\$399
/ site / month

Trust Pack
\$99
/ client / month

We're currently working with mid-market DCs in the Inland Empire to pilot Fenyx as a side-by-side accuracy layer.

Ready to stop the knowledge walkout?

Fenyx sits beside your WMS. Living rules.
Count autopsy. Ghost hunt. No adjustments posted.
